darker: preferred defender position

2022-08-26 · Fortuna Düsseldorf vs SSV Jahn Regensburg · 29:14

Figure 2. Nash equilibrium choices during an off-ball play at 0.0 s, 0.6 s and 1.2 s. Percentages are action probabilities. Orange lines show the defender's expected movement from each starting position. Gray dotted lines and hollow markers show the players' actual movement over the next 0.6 s. Shading is the attack's expected threat in equilibrium if the defender started at that spot (darker = lower threat).
